

## Joseph

QUESTIONS	RESPONSES
Tell me about yourself.	I am a senior here at CART, I was in the cybersecurity lab last year. This year I am taking Web Application Development, taught by Mr. Fast. I am a motivated worker who is very vocal about issues but I make a point of talking about good things or progress so as not to seem negative.
What are your skills and/or qualifications for the position?	I have several skills that are perfect for a web application development internship. I have made different versions of websites and worked on many team projects in my Web Application Development lab. The coding languages I know are, CSS, HTML, and Javascript. I have qr code here to some of my work I have done.
Tell me about your strengths and weaknesses.	I believe that one strength I have is being able to work with most people. I do work really well with people who are motivated as they rub off on me and vice versa. I also will be a leader in groups when needed to be. I have a good understanding of the people I work with after around a week of interaction. Some weaknesses are that I do less outside of work hours. When I get home I like to leave my work mindset alone until I get together with my group again.
What are your goals one year from now? Five years from now? What are you doing now to prepare for your future goals?	One year from now I want to be in AZ at Grand Canyon University. Five years from now I hope to be serving in the military for however many years the Gov help fund my tuition. I prepare for these goals by keeping checklists and talking to people who recruit or have been in these fields and places to see what I need to prepare.
Tell me about a situation that illustrates your ability to work with others.	We as a class in Web Application Development needed to make presentations on 2 different CSS selectors. So first to divvy out who is doing what I made a Google Doc with instructions and shared it with everyone in my class. After everyone had their selectors I had them make the powerpoint slideshow on their unique selector and share it with me. I had it done this way because when everyone had access to the same Google Slides things got messy. After that I told them that it needs to be submitted to me half an hour before the due time, this left buffer time for me and other people to make changes.
Tell me about a time you had to make an important decision on your own.	I guess one thing that stands out to me as a response is the time I had to decide to kill an animal that was injured, or to go get my uncle to help. I decided to kill it because the time it would be left alone while fetching my uncle would be enough for predators to kill it in a less humane way then I thought I could. The correct choice was to get help because I realized that I only half committed and made it suffer more.
Tell me about a situation where you resolved a problem/conflict with another person.	I diffused an argument that was about to ascend to blows. By moving one person who was playing a part in it away and stepping between them. I would do this a little differently in the future, I would hope to not put my own body in the way of harm but having one or more of

	the instigators leave.
What do you think about tardy and attendance policies?	I think they should be a part of every environment. When there is a reason for being late I think it should have the opportunity to be documented and sent higher up and saved for future reference to help in the case of defamation of character or other troubles but overall I am for tardy and attendance policies.
Describe a time when you had to learn a new task or process. What techniques did you use to learn it?	When I first started a big project in my Web Application Development class I had to plan out the content and thought process as a flowchart. This was different because up until this point I just went for the end goal after getting a general direction but planning it out saved some headache later on. I learned how to use a flowchart with a few attempts and referencing some examples.
Give an example when your attention to detail paid off.	I was at Clovis High in my psychology class and we were running experiments on half the class. After the 3rd test subject I noticed that they all looked at the same place on our constant variable, they could see the answers on the back! I called them out on it and the teacher let it slide but stopped future attempts.
Do you have any questions? (must ask questions)	I was wondering what the team composition is like in your development apartment? After that I have a few questions about if (blank) has a retirement plan.
